

Name: Audriana Linares

Project: Design and code a website with the knowledge from what we have learned in the previous weeks.

I used HTML, CSS, Bootstrap, and JQuery for this project.

The things I would like to improve:

1. Be able to quickly and efficiently resize images on my pages and on my background.
2. I would like to improve on bootstrap. I was unable to make the carousel centered in my gallery page.
3. I would like to improve on CSS.
4. I would like to improve on everything. I had to look back at notes and modules to make sure I was constructing things correctly.
